

Your App + Toast: How It Works

SECOND SHIFT AI

You keep Toast exactly as it is. Your Gritz N Wafflez app gives guests reward codes; your server applies them with one tap on a Toast discount button you set up once. No new hardware, no app download for guests, no change to how you take payment.

At the register, step by step

1. **Guest opens their reward in the app** (they scanned the QR on the table). It shows the reward, a unique code like **WIN-7K3P**, and when it expires.
2. **Guest shows their phone** to the server when they order or close out.
3. **Server rings the order into Toast like normal**, then taps the matching discount button, e.g. "GNW App - Free Side".
4. **Server types the code** in the discount's reason/note field, so every app discount is tracked in Toast's reports.
5. **Server marks the code used** on the staff screen (type code → Mark used). It can never be used again.
6. **Points:** guest shows their 4-digit code; staff enter it with the check total and points land on the guest's phone instantly.

Time per check: a few seconds. Payment, tips and closing out stay 100% in Toast.

Who makes the codes, and the rules

The app makes every code automatically. Nobody writes codes by hand, and you decide what each reward is worth.

Rule	How it works
Unique codes	Every reward gets its own code, tied to one guest
One use only	Once staff mark it used, it is dead
Expires in 3 days	Game wins and weekly prizes must be used within 3 days, so guests come back quickly
No stacking	A guest holds one game reward at a time and must use it before winning another
One reward per visit	Staff apply one app reward per check
Weekly champion	Top game score each week wins a bigger prize (same 3-day window); their Instagram shows on the leaderboard
Birthday treat	Unlocks on the guest's birthday; they show a photo ID with that date

One-time Toast setup (about 15 minutes, we do it with you)

In Toast Web → discounts, add one discount per reward. Turn on "requires a reason" (or manager approval) so each one carries its code.

Toast discount name	Type	Amount
GNW App – Free Side	Item, fixed	price of the side
GNW App – Free Drink	Item, fixed	price of the drink
GNW App – Free Waffle	Item, fixed	price of the waffle
GNW App – \$5 Off	Check, fixed	\$5.00
GNW App – Birthday Treat	Item, fixed	your pick
GNW App – Weekly Champion	Check, percent	50%

Starter examples – you choose the real rewards and prices from your menu. Toast's discount report then shows exactly what the app gave away and brought in each week.

What guests see while they wait for a table

Scan the table QR

Your menu with real-looking photos, a game built around your food, points, rewards, birthday treat, refer-a-friend. Nothing to download.

You own the list

Every signup (phone, email, birthday) lands in your customer list. Text everyone in one tap: "Karaoke tonight 6-10!"

Phase 2: connecting straight to Toast

Once the app is running, we apply to Toast's partner program for direct API access. That approval is Toast's decision and can take several weeks. With it, table orders drop straight onto your Toast tickets, points post from the real check total, and rewards apply themselves. Until then, Phase 1 works from day one with the Toast you already have.

Questions or changes: we update rewards, percentages and expiry windows the same day.
